MORE THAN THE CODE

In your first semester, you will already be writing code and building systems soon after, always thinking of the impact of your work in the light of a Christian Reformed tradition. Artificial Intelligence has not retired that question, it has sharpened it. Faith holds together the craft of building something that works and the wisdom to know how to shape it.

ADVICE FOR HIGH SCHOOL

The Computer Science Department advises you to take mathematics as far as your school offers it, and take English and your science courses seriously. This degree asks you to reason, write, and argue as much as to code. If your school teaches programming, that can provide additional preparation.

WHAT THE DEGREE LEADS TO

- Software engineering
- Artificial Intelligence and machine learning
- Cybersecurity and computer forensics
- Data Science and analytics
- Cloud architecture and infrastructure
- Databases and information systems
- Embedded systems

STUDENT ORGANIZATIONS

- Abstraction
- Girls Who Code
- Google Developer Student Club

Additional department events include game nights, Lego events, scavenger hunts and sticky-note pixel art.

MENTORED FROM THE START

You have a faculty mentor from your first semester, and you meet throughout your four years, so there is always someone you can turn to when you need advice or a reference.

CONFERENCES AND COMPETITIONS

The Calvin Chapter of Girls Who Code takes students to the Grace Hopper Celebration, the largest gathering of women in computing anywhere, and faculty travel with them. Other conferences include:

- Calvin Hackathon
- GrrCon and GR Tech Week
- CCSC and the Create Conference
