Calvin UNIVERSITY 1876

COMPUTER SCIENCE AT CALVIN

Computer Science Department

WHAT IS IN THIS FOLDER

1 **Computer Science at Calvin**

Learn more about the degrees in Computer Science, Computer Science Plus and Data Science, and about our cybersecurity certificate. Our BCS is accredited by the Computing Accreditation Commission of ABET.

2 **Meet the Faculty**

The professors who teach in the Computer Science Department, their research, and how to reach out to any of them directly.

3 **A Map for Your Four Years**

A semester-by-semester course plan you can tick off, one sheet for each degree.

IF YOU HAVE NEVER WRITTEN CODE

No previous experience in programming is needed! CS 108, the first course in your major, starts from the beginning. Math, Science, English and some coding in high school will leave you well equipped for your four years at Calvin.

DEPARTMENT OF COMPUTER SCIENCE

North Hall · 3201 Burton Street SE, Grand Rapids, MI 49546 · (616) 526-6000

Fall 2026

Calvin UNIVERSITY 1876

COMPUTER SCIENCE

DEPARTMENT DISTINCTIVES

At the Computer Science Department you can get your major in three ways: the Bachelor of Computer Science (BCS), Computer Science Plus (BS in CS), or Data Science (BS in DS). You can also receive a minor in Computer Science, Data Science and Data Analytics, and a new certificate in cybersecurity. You can work beside professors who research Artificial Intelligence and publish on how computing is taught. A liberal arts core education means you graduate with the skills to write and communicate in addition to coding, and every professor is a committed Christian who brings their faith into their teaching and research.

BACHELOR OF COMPUTER SCIENCE (BCS)

The BCS is ABET-accredited, with coursework spanning algorithms, Artificial Intelligence, security, databases, networks, and software engineering. You can move into software development, networking, and systems work, or on to graduate study at places like Johns Hopkins, MSU, Michigan Tech, Purdue and the University of Sydney.

COMPUTER SCIENCE PLUS (BS IN CS)

The BS in CS is a full Computer Science degree paired with a second field, so you can bring computing to the subject you care about: business, psychology, languages, or another field entirely. Our Strategic Partners Council regularly reviews the curriculum so it tracks the technologies employers actually use, and you have opportunities to take paid internships or do research with faculty.

DATA SCIENCE (BS IN DS)

Calvin was among the first Christian institutions to offer Data Science. You combine Computer Science, Statistics, and Mathematics with four to five courses in a second discipline such as Biology, Geography, Business, Economics, or Political Science, then finish with a capstone project on real data.

CYBERSECURITY CERTIFICATE NEW FOR FALL 2026

The certificate prepares you for a career protecting computer systems and networks. Eighteen credit hours in cryptography, network defense, and system administration, designed around the NSA's Cyber Defense knowledge units and taught by a professor with three decades in network security. As a BCS student, you earn the certificate inside your existing major with no added credit hours. The Bureau of Labor Statistics projects this field will grow 21 percent between 2025 and 2035.

Derek Schuurman

PROFESSOR · CHAIR · NH 296

Focus: Faith and Technology, Embedded Systems and IoT, Robotics and Computer Vision

Email: derek.schuurman@calvin.edu

- PhD, McMaster University
- BASc and MASc in Electrical Engineering, University of Waterloo
- Writes on the ethics and philosophy of technology

Ken Arnold

ASSOCIATE PROFESSOR · NH 298

Focus: Data Science, Artificial Intelligence and Christian Faith

Email: ken.arnold@calvin.edu

- PhD in Computer Science, Harvard University, 2020
- SM, MIT Media Lab; BS in Electrical and Computer Engineering, Cornell
- Language models for writing, and public understanding of what AI can and cannot do

Eric Araújo

ASSOCIATE PROFESSOR · NH 293

Focus: Agent-Based Modelling, Complex Networks, Computational Social Science

Email: eric.araujo@calvin.edu

- PhD in Computer Science, Vrije Universiteit Amsterdam
- MS, Federal University of Minas Gerais; BS, Federal University of Viçosa, Brazil
- Studies how behaviour, health and misinformation spread

Rocky Chang

PROFESSOR · NH 299A

Focus: Network Security, Internet Infrastructure, Computational Thinking

Email: rocky.chang@calvin.edu

- PhD in Computer and Systems Engineering, Rensselaer Polytechnic Institute
- More than 30 years teaching Computer Science
- Leads the cybersecurity certificate

Victor Norman

ASSOCIATE PROFESSOR · NH 297

Focus: Computer Science Education, K-12 Outreach, Computing for Christian Missions

Email: victor.norman@calvin.edu

- PhD and MS, Purdue University; BS, Calvin College
- 14 years in industry as a principal software engineer before teaching
- Works on applying the virtues to how we write programs

Fernando Santos

ASSISTANT PROFESSOR · NH 291

Focus: Data Science, Computational Modelling, Human-Computer Interaction

Email: fernando.santos@calvin.edu

- PhD in Computational Science, University of São Paulo
- Also works on the philosophy of technology

Chris Wieringa

SYSTEMS ENGINEER · SB 319

Focus: The labs, the servers and the systems every course here runs on

Email: chris.wieringa@calvin.edu

- Runs the labs, servers and systems behind every Computer Science course

Calvin UNIVERSITY 1876

LEADING THE WAY TO A BETTER FUTURE

computing.calvin.edu

COMPUTER SCIENCE DEPARTMENT

CHRIST-CENTERED UNDERSTANDING

Technology is not neutral. This is a crucial part of how we teach you to build new tools for the world. You will be challenged by the many discussions on the ethics and philosophy of technology as you progress in your knowledge of Computer Science. Faith is not an appendix, but the core of what we learn together here.

PROFESSORS WITH OPEN DOORS

Every course in the major is taught by a professor, whose offices sit along one corridor in North Hall. Their doctorates come from Harvard, Purdue, McMaster, Rensselaer, Amsterdam and São Paulo, and several worked in industry first. Their doors stay open, and you are welcome to stop by.

FOUR-YEAR PATH TO GRADUATION

The Bachelor of Computer Science is 124 credit hours when paired with the Calvin Core, so you graduate with a breadth of knowledge as well as depth in your field. The degree is ABET accredited, the standard employers and graduate schools look for.

ABET | Computing Accreditation Commission

ACADEMIC OPTIONS

DEGREES

Bachelor of Computer Science (BCS)
ABET accredited.

BS in Computer Science Plus
Computer Science with an applied field of your choice.

BS in Data Science
Computer Science and Statistics, paired with a subject area.

MINORS

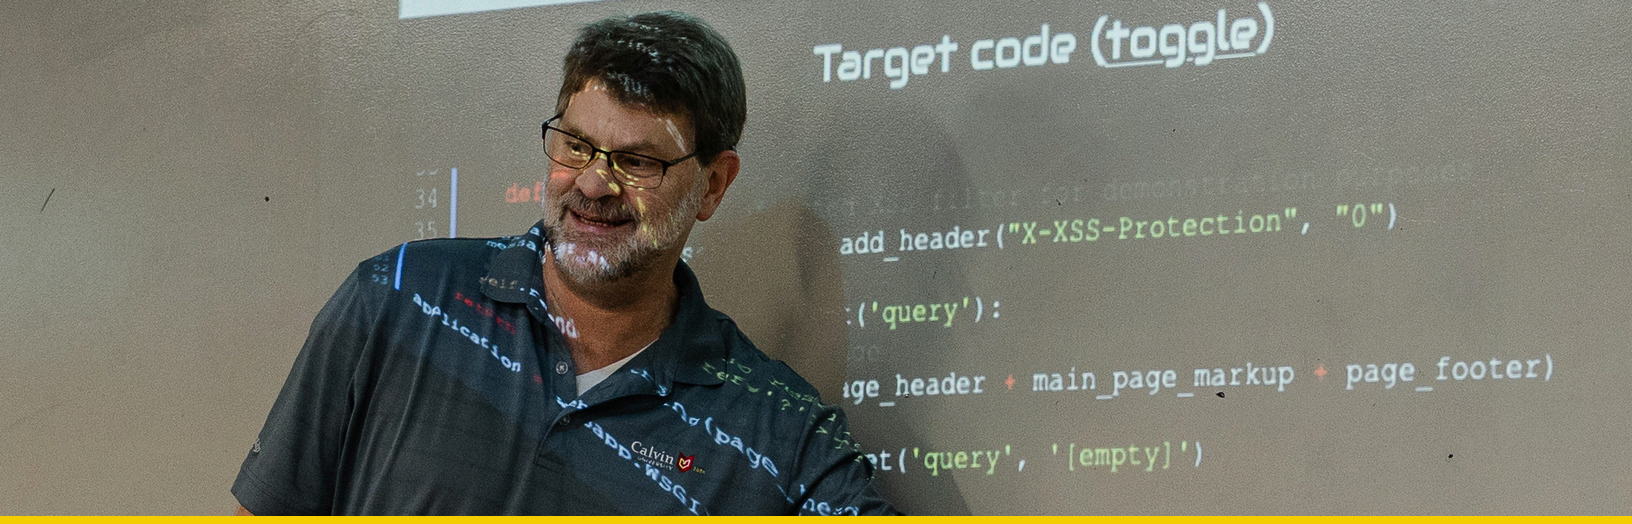

Data Science
Data Analytics

CERTIFICATE

Cybersecurity
Six courses, 18 credit hours, taken with any of the degrees.

Biology · Business · Economics · Geography · Political Science · Psychology · Languages

WHAT YOU DO HERE

INTERNSHIPS THAT LEAD SOMEWHERE

You have the opportunity to work a paid internship at a local firm or a national one. For some, internships become full-time jobs. Recent placements include AMD, Amazon Web Services, General Motors, Corewell Health, Navy Federal Credit Union, Meta, Vervint, Bindplane, EduStaff, Sonset Solutions, Wycliffe Bible Translators, and the Christian Classics Ethereal Library.

UNDERGRADUATE RESEARCH OPPORTUNITIES

You can join a professor's research as an undergraduate student. Current research spans language models and everyday creativity, internet infrastructure and security, agent-based models of how misinformation and health behaviour spread, education tools, high performance computing, Artificial Intelligence, and embedded systems.

LIBERAL ARTS AND THE CALVIN CORE

Employers want people who can assess a problem, think it through, communicate it in writing, and work well with colleagues, clients, and the people they report to. That is what the Calvin Core builds, and it is woven throughout your undergraduate experience.

WHERE OUR GRADUATES GO

Calvin CS alumni are currently at Google, Amazon, Meta, Steelcase, Corewell Health, Bank of America, the Washington Post, Amway and Pray.com. Others have gone on to graduate school at Johns Hopkins, MSU, Michigan Tech, Purdue, the University of Waterloo, and the University of Sydney, and some now teach at Grand Valley State University and George Mason University. Some have stayed to work at Calvin after graduating, joining the Christian Classics Ethereal Library and hymnary.org.

EDUCATION & COURSEWORK

FOUNDATIONS: YEARS 1 AND 2

You will begin to write programs in CS 108 in your first semester, and CS 112 takes you into data structures the semester after. The first two years build the craft and the theory underneath your major: programming, the machine below the language, and the mathematics that lets you prove an algorithm works rather than hoping it does. Core courses run during the first year too, so the questions about what computing is for start early.

DEPTH: YEARS 3 AND 4

In the latter half of your degree, you choose the direction you would like to specialize in: systems and networks, Artificial Intelligence and data, security, software engineering, or another applied area of your choice. Your fourth year goes into a capstone project, one employers and graduate schools ask about.

CALVIN HACKATHON

- You form teams and create a project from scratch in 24 hours
- You can also compete off campus
  - *Fun fact: a Calvin pair took first place at the Atomic Object games*

CYBERSECURITY CERTIFICATE

- Six courses, 18 credit hours, taken with any degree
- Built around the Cyber Defense knowledge units published by the NSA and NCAE-C

SEMINARS

- Professionals from the field speak about careers and where Computer Science, Data Science and AI are heading
- Held in all four years, not only the last

SENIOR PROJECT

- A yearlong team project
- Teams select a project, then plan, research, build, test, and deploy it over the year
- Teams have the option to do a research study instead
- Every project creates a public website and a poster that showcase your work

The full course list for each degree is on the model program sheets in this folder, one per degree.

MORE THAN THE CODE

In your first semester, you will already be writing code and building systems soon after, always thinking of the impact of your work in the light of a Christian Reformed tradition. Artificial Intelligence has not retired that question, it has sharpened it. Faith holds together the craft of building something that works and the wisdom to know how to shape it.

ADVICE FOR HIGH SCHOOL

The Computer Science Department advises you to take mathematics as far as your school offers it, and take English and your science courses seriously. This degree asks you to reason, write, and argue as much as to code. If your school teaches programming, that can provide additional preparation.

WHAT THE DEGREE LEADS TO

- Software engineering
- Artificial Intelligence and machine learning
- Cybersecurity and computer forensics
- Data Science and analytics
- Cloud architecture and infrastructure
- Databases and information systems
- Embedded systems

STUDENT ORGANIZATIONS

- Abstraction
- Girls Who Code
- Google Developer Student Club

Additional department events include game nights, Lego events, scavenger hunts and sticky-note pixel art.

MENTORED FROM THE START

You have a faculty mentor from your first semester, and you meet throughout your four years, so there is always someone you can turn to when you need advice or a reference.

CONFERENCES AND COMPETITIONS

The Calvin Chapter of Girls Who Code takes students to the Grace Hopper Celebration, the largest gathering of women in computing anywhere, and faculty travel with them. Other conferences include:

- Calvin Hackathon
- GrrCon and GR Tech Week
- CCSC and the Create Conference
