CS Tour Card

Discovery Day. Based on Keith's route. Fill in the four blanks on the day.

Start: Engineering Building **Split:** CS peels off from ENGR **Date:** _____ **Slot:** _____

With: _____ **Group:** _____

ROUTE

1. **My office** — individuals and small groups
   Open here. Find out what draws each of them to CS before saying anything about the program.
   "What made you put computer science on your list?"

2. **CCEL** — Harry's work
   Long-standing, internationally known. Web, database and ML development happening in-house.

3. **Textbook display**
   Larry's textbooks put Calvin CS on the international map. Derek's books on Christian perspectives on technology.

4. **SB 354** — the labs
   Labs are central to every CS course. If a CS262 lab is running, this is the best stop on the tour: visitors walk up to a project team and ask for a live demo and why it matters.
   Check before the slot starts whether a lab is actually in session.

5. **Machine room** — Chris, our systems engineer
   Ask Chris to walk the racks. Usual hits: the supercomputer, and the virtual machines built for specific courses.

6. **Student lounge** — land here
   Sit down. Freeform. You ask them questions, they ask you. Leave real time for this.

> **Six stops will not fit.** After the Engineering portion and the split, the CS half is roughly 20 to 25 minutes. Pick three or four and land in the lounge. The office opener and the lounge close are the two that do the most work; SB 354 is the one worth walking for if a lab is live.

BE READY TO TALK ABOUT

- Student employment on campus
- Internships, and how students get them
- Team projects
- AI: where it sits in the curriculum and in the work
- ABET accreditation
- Potential NSA accreditation
- Women in computing group, very active. Raise it with prospective women students.

THIS GROUP

Admissions sends a registration export a few days ahead. It carries no intended major, so ask in the lobby who is here for CS. An Admissions staffer walks with you.

Keith's caveat: Keith had his own stories, jokes and questions for each stop. Build your own rather than borrowing his.
For the script: Note where the split happened, how much time was left, how many followed you, which rooms were usable at the start of the slot, and what they asked unprompted.
