

COMPUTER SCIENCE

ABET ACCREDITED

CHRIST-CENTERED UNDERSTANDING

Technology is never neutral, and we say so out loud. You will study the ethics and philosophy of technology alongside the engineering of it, and ask what a piece of software does to the people who use it. Faith integration with computing is a research area here, not an add-on module.

TAUGHT BY PROFESSORS, ALL SIX OF THEM

Six professors teach the courses in the major, and their offices sit along one corridor in North Hall. You will not be handed off. Their doctorates come from Harvard, Purdue, McMaster, Waterloo, Rensselaer, Amsterdam and São Paulo, and several worked in industry first.

FOUR-YEAR PATH TO GRADUATION

The Bachelor of Computer Science is 124 credit hours. The Calvin Core runs alongside it, so you graduate having read and argued as well as built.

[The number that belongs here is the four-year graduation rate, or the share of students who complete an internship. Engineering leads with both. We do not have ours yet.]

v1.4 for review

ACADEMIC OPTIONS

DEGREES

Bachelor of Computer Science (BCS)
Our most rigorous programme. ABET accredited.

BS in Computer Science Plus
Computer science with an applied field of your choice.

BS in Data Science
Computer science and statistics, paired with a subject area.

MINORS

Data Science
Data Analytics

CERTIFICATE

Cybersecurity
Six courses, 18 credit hours, taken alongside any of the degrees.
