

EDUCATION & COURSEWORK

FOUNDATIONS: YEARS 1 AND 2

You start writing programs in your first semester, whatever you have done before. The first two years build the craft and the theory underneath it: programming, data structures, the machine below the language, and the mathematics that makes algorithms provable rather than hopeful. You take Core courses alongside, so the questions start early.

[Name the first-year courses here. A family wants to see CS 108 and CS 112 on the page.]

DEPTH: YEARS 3 AND 4

In the upper years you choose the direction: systems and networks, artificial intelligence and data, security, software engineering, or the applied field you paired with. Every student finishes with a senior project built to a real brief, presented and published as a website of its own.

CALVIN HACKATHON

- A weekend, a team, and something that works by Saturday night
- Students also compete off campus. A Calvin pair took first place at the Atomic Object games, ahead of Grand Valley

CYBERSECURITY CERTIFICATE

- Six courses, 18 credit hours, taken alongside any degree
- Built around the Cyber Defense knowledge units published by the NSA and NCAE-C
- Courses run on a rotation rather than all in one semester

SENIOR PROJECT

- A full-year build for a real brief
- Every project ships a public website, and this year a poster too

CLUBS AND COMMUNITY

- Abstraction and Women in Computing
- Game nights, Lego events, scavenger hunts and sticky-note pixel art

The full course list for each degree is on the model program sheets in this folder, one per degree.
