

COMPUTER SCIENCE

DEPARTMENT DISTINCTIVES

Three majors: Bachelor of Computer Science, Computer Science Plus, and Data Science. Add to that minors in computer science, data science, and data analytics, plus a new certificate in cybersecurity. Students work on high-end equipment you'd normally find only at a tier-one research school. Every professor is a committed Christian who brings that faith to bear on their teaching and their code.

BACHELOR OF COMPUTER SCIENCE

Our flagship major is ABET-accredited, meeting the same standards as programs at major research universities. Coursework spans algorithms, artificial intelligence, security, databases, networks, and software engineering. Graduates move into software development, network engineering, and systems work, or on to graduate study at Michigan, MIT, Purdue, Stanford, Texas, and Wisconsin.

COMPUTER SCIENCE PLUS

A full computer science degree paired with a second field such as business, psychology, or language, for students who want to apply computational thinking wherever their interests lie. Our Strategic Partners Council regularly reviews the curriculum so it tracks the technologies employers actually use, and students take paid internships and research alongside faculty.

DATA SCIENCE

Calvin was among the first Christian institutions to offer data science. Students combine computer science, statistics, and mathematics with four to five courses in a second discipline such as biology, geography, business, economics, or political science, then finish with a capstone project built for a professional portfolio.

CYBERSECURITY CERTIFICATE NEW FOR FALL 2026

Eighteen credit hours in cryptography, network defense, and system administration, designed around the NSA's Cyber Defense knowledge units and taught by a professor with three decades in network security. BCS students earn the certificate inside their existing major with no added credit hours. Hands-on labs, projects, and internships throughout. This field is projected to grow 33 percent this decade.
