MORE THAN THE CODE

You write code in your first semester and build systems soon after, always thinking of the impact of your work in the light of a Christian Reformed tradition. Artificial intelligence has not retired that question, it has sharpened it. Faith holds together the craft of building something that works and the wisdom to know how to shape it.

ADVICE FOR HIGH SCHOOL

Take mathematics as far as your school offers it, and take English and the sciences seriously. This degree asks you to reason, write, and argue as much as to code. If your school teaches programming, that can provide additional preparation.

WHAT THE DEGREE LEADS TO

- Software engineering
- Artificial intelligence and machine learning
- Cybersecurity and computer forensics
- Data science and analytics
- Cloud architecture and infrastructure
- Databases and information systems
- Embedded systems

STUDENT ORGANIZATIONS

- Abstraction
- Women in Computing
- Google Developer Student Club

Game nights, Lego events, scavenger hunts and sticky-note pixel art.

MENTORED FROM THE START

Every student has a faculty mentor from the first semester. You meet through your four years, so there is someone who knows your work when you need advice or a reference.

CONFERENCES AND COMPETITIONS

Women in Computing takes students to the Grace Hopper Celebration, the largest gathering of women in computing anywhere, and faculty travel with them. Other conferences include:

- Calvin Hackathon
- GrrCon and GR Tech Week
- CCSC and the Create Conference
