Calvin UNIVERSITY 1876

COMPUTER SCIENCE

DEPARTMENT DISTINCTIVES

At the Computer Science Department you can get your major in three ways: the Bachelor of Computer Science (BCS), Computer Science Plus (BS in CS), or Data Science (BS in DS). You can also receive a minor in Computer Science, Data Science and Data Analytics, and a new certificate in cybersecurity. You can work beside professors who research Artificial Intelligence and publish on how computing is taught. A liberal arts core education means you graduate with the skills to write and communicate in addition to coding, and every professor is a committed Christian who brings their faith into their teaching and research.

BACHELOR OF COMPUTER SCIENCE (BCS)

The BCS is ABET-accredited, with coursework spanning algorithms, Artificial Intelligence, security, databases, networks, and software engineering. You can move into software development, networking, and systems work, or on to graduate study at places like Johns Hopkins, MSU, Michigan Tech, Purdue and the University of Sydney.

COMPUTER SCIENCE PLUS (BS IN CS)

The BS in CS is a full Computer Science degree paired with a second field, so you can bring computing to the subject you care about: business, psychology, languages, or another field entirely. Our Strategic Partners Council regularly reviews the curriculum so it tracks the technologies employers actually use, and you have opportunities to take paid internships or do research with faculty.

DATA SCIENCE (BS IN DS)

Calvin was among the first Christian institutions to offer Data Science. You combine Computer Science, Statistics, and Mathematics with four to five courses in a second discipline such as Biology, Geography, Business, Economics, or Political Science, then finish with a capstone project on real data.

CYBERSECURITY CERTIFICATE NEW FOR FALL 2026

The certificate prepares you for a career protecting computer systems and networks. Eighteen credit hours in cryptography, network defense, and system administration, designed around the NSA's Cyber Defense knowledge units and taught by a professor with three decades in network security. As a BCS student, you earn the certificate inside your existing major with no added credit hours. The Bureau of Labor Statistics projects this field will grow 21 percent between 2025 and 2035.
